

Hose cutting machine Cut-MT

Cut-MT was developed for manually cutting several hoses at the same time. In its development, special attention was paid to the exact placement of hoses.

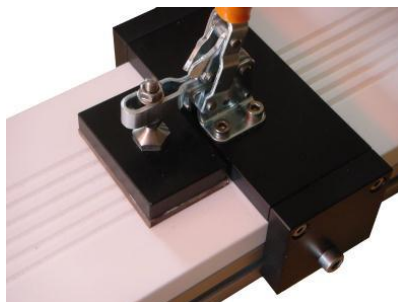

Thus, it is possible to cut soft and long hoses exactly with it. The precise knife and hose guidance make for right angles at the cutting edges. The hose will retain its original shape.

The Cut-MT is a simple machine that is perfectly suited for its task of shortening long hoses precisely. When the hoses are inserted and clamped, the carriage is used to place the hoses in the grooves almost without tension. After complete insertion, the knife, which can be set freely regarding its angle, will cut all hoses at the same time. Due to its simple operation, the machine can easily be operated by a single employee. Hose size must be indicated when ordering.

Technical Data

Materials:	All common materials such as PA, PE, PU, PTFE, Silicone,...
Tube diameter:	According to customer's wishes.
Tube guidance:	Grooves
Length:	Mechanic stop up to 2.5 m, Different lengths as desired.
Reproducibility:	Determined by length, material and supply of the tube; Typically 1%
Dimensions:	L/W/H: 2700 x 320 x 450 mm; Weight:10 kg
Scope of supply:	Basic unit, 2 blades, operating instructions English.
Accessories:	Blades.
Miscellaneous:	Special sizes and customizations on request.
